**Testimonial Quotes**

We had searched for over four years for a better Association Management System - one that would enable us to be more efficient and provide better service to our members. Computility is designed to provide multiple capabilities yet be simple, logical and easy to use. I am so impressed with how logical Computility is – it is so much easier than our old Access-based system. I love the notes section, the follow up capabilities, report generation capabilities, process management features, ease of doing database searches, ease of printing, ease of downloading what I need – definitely the most user-friendly system robust with capabilities I have ever used!

I also love the fact that Computility is Internet based and thus accessible anywhere with an Internet connection. We love having remote access and being able to bill people directly from out of town conventions and seminars. We have instant billing capabilities and record keeping onsite. The days of documenting, saving, transporting and then hoping you didn't forget someone or something in the transition are of the past. Computility has helped our organization ten-fold with management needs and service initiatives and enables us to recruit and retain more members. Computility is the answer to my management needs.

I am extremely impressed with their customer service, knowledge and expertise - they truly understand our unique needs. The entire implementation of Computility was such a pleasant experience.

I'm not in sales, but I would have no problem selling this system – it's just that good. Anyone not using Computility is missing the boat!
